PRODUCT INFORMATION

IL-27 EBI3 (Interleukin-27 EBI3), Human

| Package Description Source Sequence Endotoxin level | C01032-5UG / C01032-20UG / C01032-100UG 5 μg / 20 μg / 100 μg IL-27 protein is a member of the IL-6 superfamily, which is expressed on monocytes, endothelial cells and dendritic cells. It is also referred to as the IL-12 p35-related protein. IL-27 protein is an early product of activated antigen-presenting cells and drives rapid clonal expansion of naive CD4(+) T cells and plays a role in the early regulation of Th1 cells initiation which drives efficient adaptive immune response. It has an antiproliferative activity on melanomas through WSX-1/STAT1 signaling. Thus, IL-27 protein may be an attractive candidate as an antitumor agent applicable to cancer immunotherapy. | Endotoxin level | polyhistidine tag at the C-terminus |
| | <0.1 EU per 1 µg of the protein by the LAL method. |
| Activity | Measure by its ability to induce TF-1 cells proliferation. The ED $_{50}$ for this effect is <2 ng/mL. |
| Purity | >95% as determined by SDS-PAGE. Ni-NTA chromatography |
| Formulation | The protein was lyophilized from a solution containing 1X PBS, pH 8.0. |
| Reconstitution | It is recommended to reconstitute the lyophilized protein in sterile H_2O to a concentration not less than 100 μ g/mL and incubate the stock solution for at least 20 min to ensure sufficient re-dissolved. |
| Storage | Lyophilized protein should be stored at -20°C. Upon reconstitution, protein aliquots should be stored at -20°C or -80°C. |
