

TWEAK (TNF-related weak inducer of apoptosis), Mouse

v. 231101

Catalog number	C02050-5UG / C02050-20UG / C02050-100UG
Package	5 µg / 20 µg / 100 µg
Description	TWEAK belongs to the TNF family of ligands, and also known as TNFRSF12A through TWEAK receptor signaling. TWEAK widely expresses in a variety of tissues, including the adult heart, pancreas, skeletal muscle, small intestine, spleen and peripheral blood lymphocytes. TWEAK has the ability to trigger activation and chemokine secretion of NF-κB, and to apply an apoptotic activity in certain cells, such as HT-29 human cultured adenocarcinoma cells feeding with IFN-γ. TWEAK also promotes proliferation and migration of endothelial cells.
Source	<i>Escherichia coli</i>
Sequence	MSAPKGRKARPRRAIAAHYEVHPRPGQDGAQAGVDGTVSGWEETKINSSSPL RYDRQIGFTVIRAGLYLYCQVHFDEGKAVYLKDLLVNGVLALRCLEEFSA ASSPGPQLRLCQVSGLLPLRPGSSLRIRTLTPWAHLKAAPFLTYFGLFQVH with polyhistidine tag at the C-terminus
Endotoxin level	<0.1 EU per 1 µg of the protein by the LAL method.
Activity	Measure by its ability to induce proliferation in HUVEC cells. The ED ₅₀ for this effect is <0.2 µg/mL.
Purity	>98% as determined by SDS-PAGE.
Form	Lyophilized
Storage Buffer	Lyophilized from a 0.2 µm filtered solution of PBS, pH 7.4.
Reconstitution	It is recommended to reconstitute the lyophilized protein in sterile H ₂ O to a concentration not less than 200 µg/mL and incubate the stock solution for at least 20 min to ensure sufficient re-dissolved.
Stability & Storage	This product is stable after storage at: <ul style="list-style-type: none"> • -20°C for 12 months in lyophilized state from date of receipt. • -20°C or -80°C for 1 month under sterile conditions after reconstitution. Avoid repeated freeze/thaw cycles.

SDS-PAGE analysis of recombinant mouse TWEAK
