

From Synthesis to Delivery - Powering mRNA Therapeutics

mRNA LNP synthesis SERVICE

Croyez provides mRNA synthesis materials and services, covering mRNA reporter genes and mRNA CRISPR-Cas9. The company is also actively developing sa-mRNA (self-amplifying mRNA) and circular mRNA to enhance the stability and expression efficiency of vaccine development, protein replacement therapy, and gene editing.

Advantages

Safety

- Does not integrate into the genome
- Not infectious
- Cell-free reaction for production

Versatility & Flexibility

- In vivo synthesis of any protein target or antigen
- More flexible than protein drugs

Time

- Faster than producing traditional vaccines
- Good scalability

Cost

- Cost efficiency
Less expensive than producing proteins
